

IV Roda Científica NEP UAI

Arthur Boari

Arthur Boari

- Bacharel e Mestre em Engenharia Ambiental – UFLA
- Membro do NEP UAI (03/2019 – 03/2022)
- Experiências:
 - Análises de água e esgoto;
 - Estimativa de evapotranspiração;
 - Poluição do ar;
 - Análise de dados em R.

Material particulado

“partículas de material sólido ou líquido suspensas no ar, na forma de poeira, neblina, aerossol, fuligem, entre outros” (Resolução CONAMA nº 491/2018, art. 2º, inciso VII)

COMO É CLASSIFICADO?

THE RELATIVE SIZE OF PARTICLES

From the COVID-19 pandemic to the U.S. West Coast wildfires, some of the biggest threats now are also the most microscopic.

A particle needs to be 10 microns (μm) or less before it can be inhaled into your respiratory tract. But just how small are these specks?

Here's a look at the relative sizes of some familiar particles >

HUMAN HAIR 50-180 μm >
FOR SCALE

FINE BEACH SAND 90 μm >

GRAIN OF SALT 60 μm >

WHITE BLOOD CELL 25 μm >

GRAIN OF POLLEN 15 μm >

DUST PARTICLE (PM₁₀) <10 μm >

RED BLOOD CELL 7-8 μm >

RESPIRATORY DROPLETS 5-10 μm >

DUST PARTICLE (PM_{2.5}) 2.5 μm >

BACTERIUM 1-3 μm >

WILDFIRE SMOKE 0.4-0.7 μm >

CORONAVIRUS 0.1-0.5 μm >

T4 BACTERIOPHAGE 0.225 μm >

ZIKA VIRUS 0.045 μm >

<50 μm : PTS

Pollen can trigger allergic reactions and hay fever—which 1 in 5 Americans experience every year.

Source: Harvard Health

The visibility limits for what the naked eye can see hovers around 10-40 μm .

Respiratory droplets have the potential to carry smaller particles within them, such as dust or coronavirus.

Wildfire smoke can persist in the air for several days, and even months.

Ozônio

Ciclo de Chapman

Smog Fotoquímico

O_3 :

POLUENTE
SECUNDÁRIO

Figura 2 – Isopletas de O_3 oriundas de campanha amostral realizada na Tijuca, RJ em março de 2015 por Silva et al. (2019). A barra a direita representa a concentração de O_3 resultante da combinação de NO_x e COV.
